Sequence 9146, Application US/09949016

Patent No. 6812339
GENERAL INPORMATION:
TILLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT APPLICATION NUMBER: 60/241,755
PRIOR PELING DATE: 2000-10-20
PRIOR PELING DATE: 2000-10-20
PRIOR PELING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Activity for Gram
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              93 DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 152

APPLICANT: Gray, Beulah
APPLICANT: Maseman, Judith R.
APPLICANT: Mayo, Kevin
TITLE OF INVENTION: Synthetic Peptides with Bactericidal
TITLE OF INVENTION: Activity and Endotoxin Neutralizing Activity fo.
TITLE OF INVENTION: Activity and Endotoxin Neutralizing Activity fo.
TITLE OF INVENTION: Beative Bacteria and Methods for Their Use
NUMBER OF SEQUENCES: 60
CORRESPONDENCE ADDRESS:
ADDRESSEE: Merchant & Gould
STREET: 3100 No. 5786324west Center
CITY: Minneapolis
STATE: MN

; Sequence 2, Application US/08013801
; Patent No. 5420019
; GENERAL INFORMATION:
; APPLICANT: Theofan, Georgia
APPLICANT: Burke, David
APPLICANT: Baltaian, Manik
APPLICANT: Baltaian, Lynn S
TITLE OF INVENTION: Stable Bactericidal/Permeability-
TITLE OF INVENTION: Increasing Protein Products and Pharmaceutical
TITLE OF INVENTION: Compositions Containing the Same
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:
; ADDRESSEE: Marshall, O'Toole, Gerstein, Murray &
ADDRESSEE: Bicknell
; STREET: Two First National Plaza
CITY: Chicago
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  KMSGNFDLSIEGMSISADLKLGSNPTSGKPTITCSSCSSHINSVHVHISKSKVGWLIQLF

Patent No. 5447913
GENERAL INFORMATION:
APPLICANT: Little, Roger G.
APPLICANT: Ammons, William Steve
TITLE OF INVENTION: Therapeutic Uses of Bactericidal/Permeability-
TITLE OF INVENTION: Increasing Protein Dimer Products
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                       ..

; Patent No. 5348942
; GENERAL INFORMATION:
    APPLICANT: Little, Roger G. II
    APPLICANT: Parent, James Brian
    TITLE OF INVENTION: Therapeutic uses of
    TITLE OF INVENTION: Bactericidal/Permeability-Increasing Protein Products
    NUMBER OF SEQUENCES: 2
    CORRESPONDENCE ADDRESS:
    ADDRESSEE: Marshall, O'Toole, Gerstein, Murray & Borun
    STREE: 6300 Sears Tower, 233 South Wacker Drive
    CITY: Chicago
    STATE: Illinois
    COUNTRY: USA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

APPLICANT: Little Roger G.
APPLICANT: Anmons, William Steve
TITLE OF INVENTION: Therapeutic Uses of Bactericidal/Permeability-
TITLE OF INVENTION: Increasing Protein Dimer Products
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSES: Marshall, O'Toole, Gerstein, Murray & Borun
STREET: 6300 Sears Tower, 233 South Wacker Drive
CITY: Chicago
                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                             Length 487;
                                                                                                                                                                                                                                                                                        Indels

94US-00212132.

11-MAR-1994;

Improved use of a bactericidal-permeability increasing protein - for neutralisation of heparin and treatment of endo-toxaemia, by admin. as covalently linked dimer of N-terminal fragment. WPI; 1995-319904/41.

Example 1; Page ?; 36pp; English.

ų Compositions of N-terminal fragments (i.e. amino acids 1-193 to 1-199) human bactericidal-permeability increasing (BPI) protein are used to neutralise heparin and to treat endotoxaemia. Efficacy of such compsns: is improved when they comprise at least 50% of the truncated rBPI in

```
dimeric form. The present sequence is that of rBPI(1-193) in which the first 4 amino acids of the BPI signal peptide are removed, the codon specifying the fifth amino acid of the signal sequence (Met at position - 27) is placed in the context of a consensus Kozak translation initiation sequence. This truncated rBPI is the preferred monomer for dimerisation in the presence of copper 2+ ions. N.B. The patent specification includes the known full-langth BPI sequence but does not contain sequences for any of the truncated versions of the protein. The present sequence has been obtained by modifying the wild-type sequence according to the description given by the inventors

```
The present sequence is the recombinant endotoxin neutralising
polypeptide (RENP) B(1-190) (Lot #15969), which comprises residues 1-190
cf human bactericidal/permeability increasing protein (NBPI). The RENP,
which selectively and specifically binds lipopolysaccharide (LPG) and has
endotoxin neutralising activity, can be used to detect a site of Gram
comparive bacterial infection, and prevent or treat endotoxin related
disorders, preferably where LPS mediated stimulation of neutrophils and
monouclear cells is inhibited, e.g. shock, disseminated intravascular
coagulation, anaemia, thrombocytopaenia, adult respiratory distress
syndrome, renal failure, liver disease and conditions associated with
Gram negative bacterial infection. The RENP has an enhanced serum half
life relative to naturally occurring BPI, and binds LPS without
triggering a significant, undesirable immune response. N.B. Sequence not
given in specification, but produced using the wild type hBPI sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                            The present sequence is the recombinant endotoxin neutralising polypeptide (RENP) B(1-199) (NCY108), which comprises residues 1-199 of human bactericidal/permeability increasing protein (HBPI). THE RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and monounclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, thrombocytopaenia, adult respiratory distress coagulation, anaemia, thrombocytopaenia, adult respiratory distress cyndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half it erlative to naturally occurring BPI, and binds LPS without given in specification, but produced using the wild type hBPI sequence not given in figure 3

This is a recombinant bactericidal/permeability-increasing (BPI) protein product rBPI23. A BPI protein product can be administered especially by contacting with blood to delay or prevent clot formation in the blood or to enhance clot dissolution in the blood. A BPI protein product can also be administered, optionally with a thrombolytic agent (TA), to treat a patient sufferring from thrombotic disorders such as arterial thrombosis, cronary artery thrombosis, etroke, intracardiac thrombosis, peripheral artery thrombosis associated with exposure of blood to a foreign or injured thrombosis associated with exposure of blood to a foreign or injured thrombosis associated with exposure of blood to a foreign or injured tissue surface, hypercoagulability, non-endotoxin-associated coagulopathies, and non-endotoxin-associated disseminated intravascular coagulopathy: The BPI protein products can be used in a method for captulopathy. The BPI protein products can be used in a method for captulopathy are protein products can be used in a method for captulopathy are encorquision in a subject treated with a reperfusion or to reducing recoclusion in a subject treated with a reperfusion or to reducing recoclusion in a subject treated with captured for decreasing the dose of a TA required to establish reperfusion or to reduce reocclusion in a subject comprising co-administration of the BPI protein product and a TA, the dosage of the TA being less than that required for a desired pharmaceutical effect when the TA is administered as a monotherapy. The BPI protein product and a TA transplatic and therapeutic treatment of thrombotic agent captured, thereby reducing or eliminating potential side effects. The subject thereby reducing or eliminating potential side effects. Note: This sequence is not provided in the specification. It has been created benefit encortification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 129

inhibitor; endotoxin-felated shock; disseminated intravascular coagulation; anaemia; thrombocytopenia; ARDS; renal failure; endotoxemia; adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The human bactericidal/permeability increasing protein may be used in a compsn. solubilised in a lipid carrier. The BPIP binds lipopolysaccharides and inhibits the immunostimulatory and toxic activities of LPS in vitro and in vivo. The lipid copmsn. stably maintains the BPIP in a sol. active form. The compsn. can be used for cetecting or quantifying LPS in a sample, coating a surgical tool, coating an implantable invasive device, decontaminating a fluid conty. LPC and treating endotoxin related -shock, -disseminated intravascular coagulation, -anaemia, -thrombocytopenia, -adult respiratory stress syndrome or -renal failure, or for preventing endotoxaemia. The present sequence is the recombinant endotoxin neutralising polypeptide (RENP) B(1-212) (Lot #159693), which comprises residues 1-212 of human bactericidal/permeability increasing protein (HBPI). The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, thrombocytopaenia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undesirable immune response. N.B. Sequence not given in specification, but produced using the wild type hBPI sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lipo:polysaccharide binding and endotoxin neutralising polypeptide - useful in diagnosis, prevention and treatment of Gram-negative bacterial infection and associated disorders and conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant; endotoxin; neutralisation; RENP; Lot #159693; lipopolysacharide; LFS; bacteritoidal; permeablilty; increase; BPI; detection; Gram-negative; bacterium; infection; prevention; treatment; disorder; mediation; etimulation; neutrophil; mononuclear cell;

of human bactericidal/permeability increasing protein (hBPI). The RENP, which selectively and specifically binds lipopolysaccharide (LPS) and has endotoxin neutralising activity, can be used to detect a site of Gram negative bacterial infection, and prevent or treat endotoxin related disorders, preferably where LPS mediated stimulation of neutrophils and mononuclear cells is inhibited, e.g. shock, disseminated intravascular coagulation, anaemia, thrombocytopaenia, adult respiratory distress syndrome, renal failure, liver disease and conditions associated with Gram negative bacterial infection. The RENP has an enhanced serum half life relative to naturally occurring BPI, and binds LPS without triggering a significant, undesirable immune response. N.B. Sequence not given in specification, but produced using the wild type hBPI sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              요
                      Pseudomonas species; (b) with endotoxin neutralising activity; (c) with both endotoxin neutralising activity and bactericidal activity for beudomonas aeruginosa; (d) a hybrid peptide with endotoxin neutralising activity for activity and bactericidal activity, the peptide with endotoxin neutralising activity combined with at least 1 different amino acid sequence of a peptide with endotoxin neutralising activity combined with at least 1 different amino acid sequence of a peptide that has bactericidal activity; and (e) a prosthetic device which has a sufficient amount of BP attached to the surface to inhibit bacterial growth. The peptides of the invention are used in treating bacterial infection such as Pseudomonas strains e.g. for P. aeruginosa at 10-7 to 10-9 M, and Escherichia coli: The peptides are also used to treat endotoxin shock. The present sequence represents bactericidal permeability increasing factor from an example of the present invention

The BPI binds endotoxin in the presence of serum and plasma and, unlike other known endotoxin binding proteins such as LBP (lipopolysaccharide binding protein), BPI inhibits the immunostimulatory and toxic activities of endotoxin both in vitro and in vivo. Thus BPI can be used in the diagnosis and therapeutic and prophylactic treatment of endotoxin-related disorders including endotoxemia and endotoxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -

sequences are useful for the treatment of neurological disorders such as central nervous system (CNS) disorders, CNS-related disorders, focal brain disorders, global-diffuse cerebral disorders and other neurological and cerebrovascular disorders. The CNS disorders include Alzheimer's disease, senile dementia, Huntington's disease, amyotrophic lateral sclerosis, Parkinson's, Gilles de la Tourette's syndrome, autonomic function disorders such as hypertension and sleep disorders,
                                                                                                                                                                                                                                                                                                                                       120

The invention relates to secreted polypeptide-related proteins and nucleic acids (TAMGO and INTERCEPT proteins and nucleic acids). The nucleic acids (TAMGO and INTERCEPT proteins and nucleic acids). The uncleic acids, proteins and antibodies specific to the proteins are useful in screening assays, predictive medicine (e.g. diagnostic assays, prognostic and therapeutic methods. The sequences are used in diagnostic, and therapeutic methods. The sequences are used in diagnosing, preventing or treating proliferative disorders (e.g. multiple solerosis or lupus), neurological disorders (e.g. mlupus), neurological disorders (e.g. Alzheimer's disease or Parkinson's disease), blood placelet disorders (e.g. myocardial infarction or congestive heart disease), blood placelet disorders (e.g. thrombocytopenia or ansemia) and disorders cids may also be used in chromosome mapping, tissue typing and forensic biology, and as surrogate markers. This sequence represents a secreted colypeptide-related protein of the invention. Note: The sequence data for this patent was obtained in electronic format directly from USPTO at sequence.

fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for receing cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and particularly useful for treating or preventing myeloms, colon cancer, gastric cancer, reating or preventing myeloms or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed grown WIPO at apecification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for treating polypeptide is also belyperide is an attractional polypeptide. The polypeptide is also class I mHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                              Translational profiling, expressed protein tag, EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatablity complex; myaloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

```
The invention relates to human polynucleotides and the polypeptides they encode. The invention also relates to a host cell containing a polynucleotide of the invention, an antibody which selectively binds with a polypeptide of the invention, a method of detecting the presence of a polypeptide in a sample, a method of identifying a compound which binds with a polypeptide, and a method of modulating the activity of a

C,Comment: The bactericidal/permeablity-increasing protein (BPI) is a 60 kD membrane-as which is specific for gram-negative bacteria. BPI has a high affinity for lipopolysaccha between BPI and an LPS-binding protein from liver and cholesteryl ester transfer proteir

A, Title: Complete cDNA encoding human phospholipid transfer protein from human endothelis

A, Reference number: A53533; MUD:94179366; PMID:8132678

A, Recession: A53533

A, Status: preliminary

A, Molecule type: mRNA

A, Residues: 1-493 cDAY

A, Cross-references: UNIPROT:P55058; GB:L26232; NID:9468325; PIDN:AAA36443.1; PID:9468326

C; Genetics: A, Genetics: GDB:340911; OMIM:172425

A, Cross-references: GDB:340911; OMIM:172425

A, Map position: 20pter-20gter

C, Superfamily: lipopolyaeaccharide-binding protein

C, Repwords: Glycoprotein; phosphoprotein

F;1-17/Domain: signal sequence #status predicted <SIG>
